

SAFE WATER NOTICE

FOR THE CUSTOMERS SERVED BY THE ODD FELLOWS SIERRA RECREATION ASSOCIATION WATER SYSTEM

On April 19, 2013, you were notified that due to a water main break and loss of pressure in the Odd Fellows Sierra Recreation Association, it was recommended to boil the tap water for drinking or cooking purposes as a safety precaution.

After repairs were completed, the Odd Fellows Sierra Recreation Association distribution system was repressurized. Afterwards, the distribution system was disinfected and flushed. On May 2, 2013, five (5) bacteriological samples were collected from the Odd Fellows Sierra Recreation Association's distribution system followed by three (3) bacteriological samples on May 4, 2013. All samples tested negative for total coliform and E coli bacteria. The Odd Fellows Sierra Recreation Association, in conjunction with the California Department of Public Health, has determined that **your tap water is now considered safe to drink. It is no longer necessary to boil the tap water or consume bottled water. It is recommended that prior to using your water you should flush to piping in your house by letting the water run until it is free of cloudiness, discoloration, or sediment.**

For more information please contact Mark Higgins, with Odd Fellows Sierra Recreation Association at (209)768-8872, or you may contact California Department of Public Health at (559) 447-3300.
